

Local Services Finder & Booking Platform

Finding reliable local service providers can be time-consuming. This platform connects customers with nearby services, allows them to check availability, and book appointments. Providers can manage their listings and schedules efficiently.

Key Outcomes & Modules

1**Dual Dashboards**

Separate interfaces for customers and service providers.

2**Real-time Booking**

Calendar and profile management for seamless appointments.

3**Geo-filtering**

Location-based search for relevant service listings.

4**Ratings & Reviews**

System for feedback and booking history.

5**Admin Moderation**

Approval and oversight of all listings.

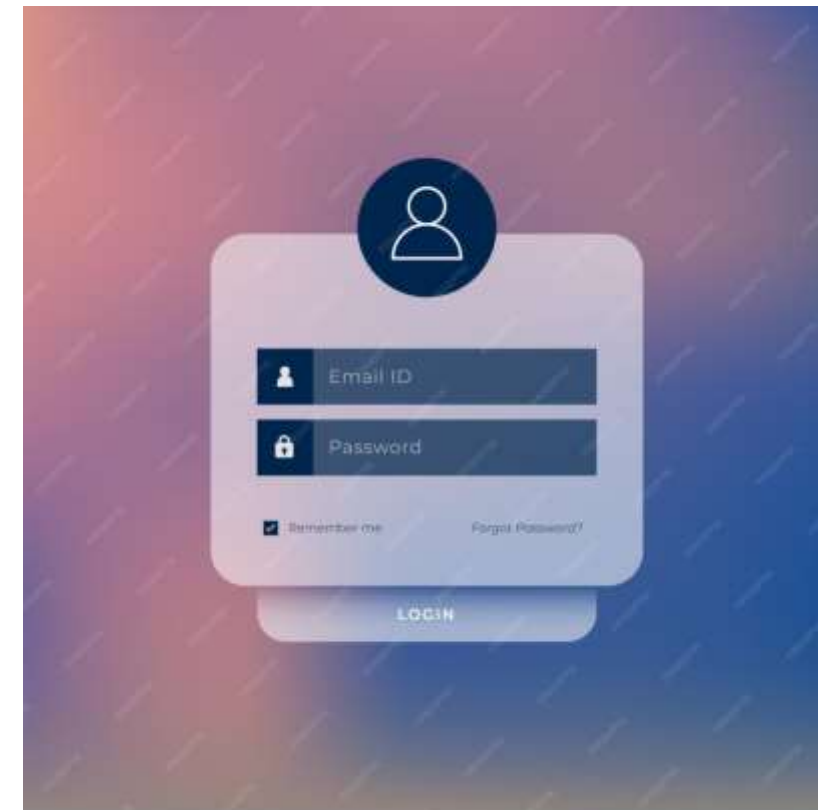

Milestone 1: Login & Profile Setup

1. Role-Based Authentication

Users register as either a Customer or Service Provider, determining dashboard access and permissions.

2. Service Category Setup

Providers complete profiles by selecting relevant service categories (e.g., plumbing, tutoring).

Milestone 2 & 3: Listings & Booking

Manage Listings

Providers create, edit, and delete detailed service listings with pricing and availability.

Search & Filter

Customers search by category, keywords, and location; results ranked by proximity/relevance.

Booking Calendar

Customers choose available time slots; system prevents double bookings and sends confirmations.

Milestone 4 & 5: Feedback & Admin

Ratings & Feedback

Customers submit 1-5 star ratings and comments on completed services. Users can view service history and past feedback.

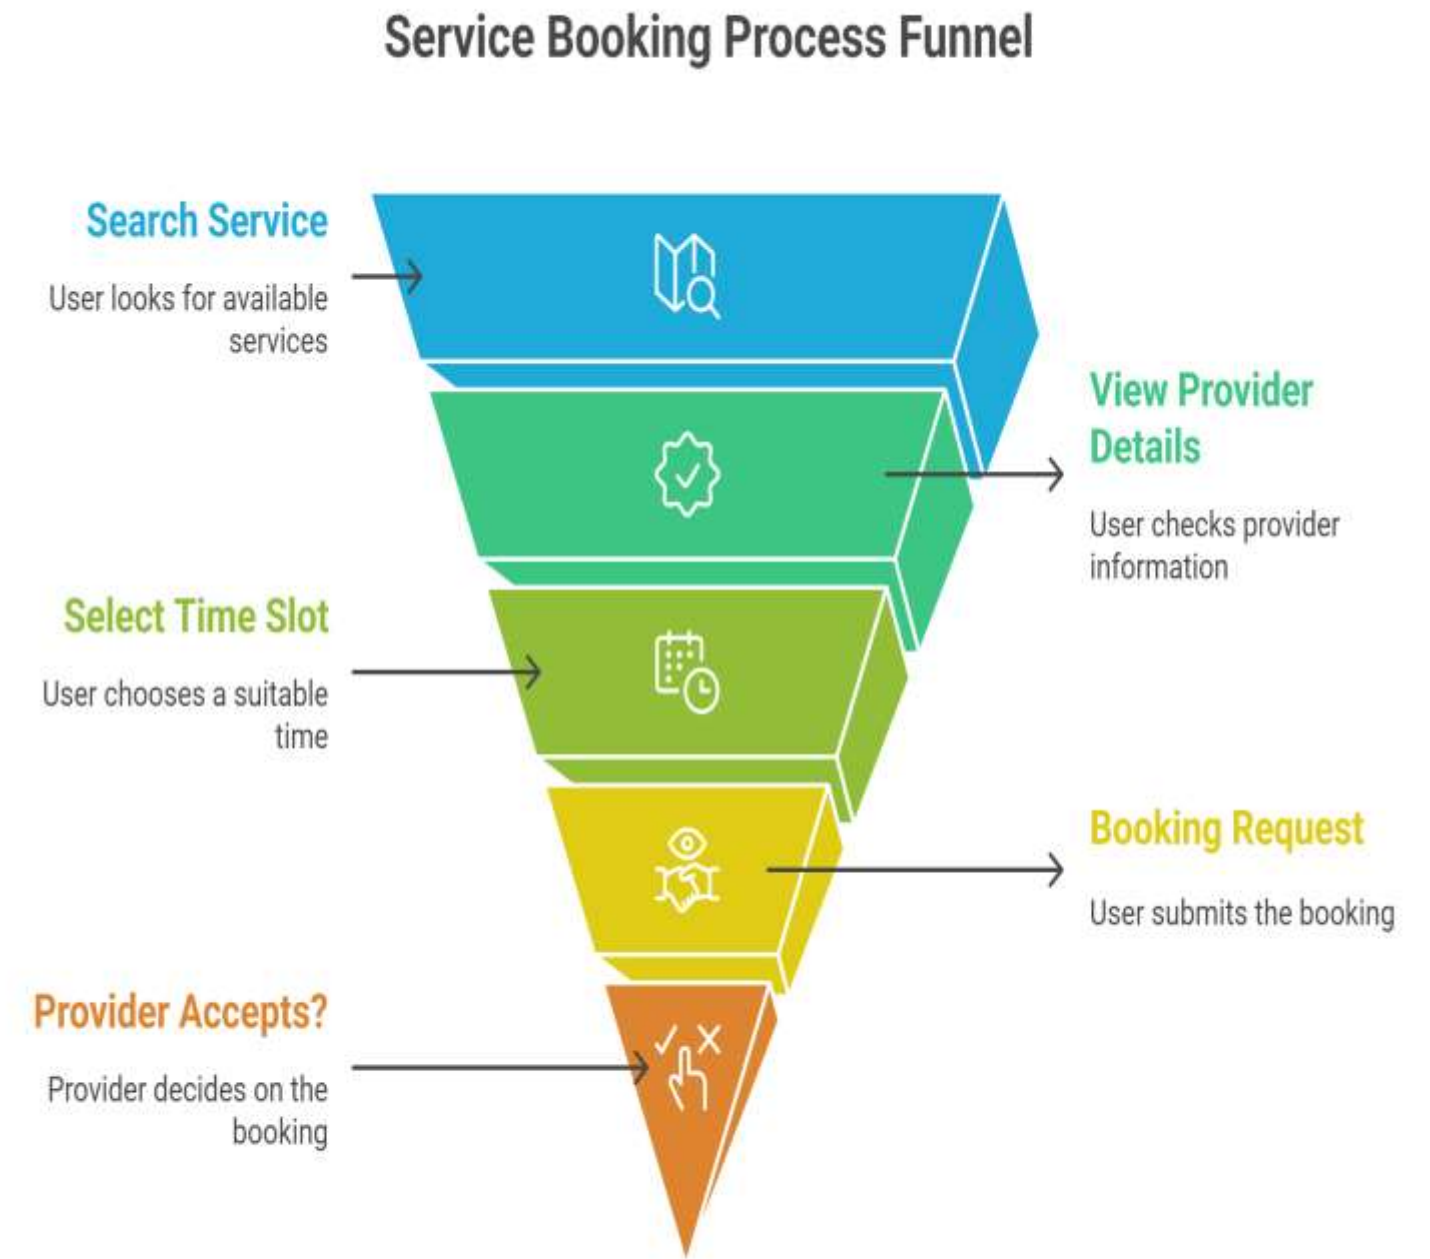

Admin Panel

Admins approve/reject new listings and monitor platform usage with analytics on top categories and services.

System Architecture & Workflow

The platform's robust architecture supports seamless interactions between users and providers, managed by a comprehensive admin system. The workflow ensures efficient service discovery, booking, and feedback.

Conclusion

A robust and efficient platform

ensuring seamless service delivery from discovery to completion.

An intuitive and smooth booking experience

designed for maximum user convenience and satisfaction.

Empowering administrators

with data-driven insights for continuous improvement and strategic decision-making.

Demonstrates strong real-world applicability

addressing critical needs within the local services market.
